The iPad as a Classroom Tool
Presentation for the Down Syndrome Association of Victoria
Jane Farrall Consulting
March 2012

iPad basics
Please check out the Macworld iPad2 Starter Guide.

Also, make sure you check out Apple’s App License Agreement or there is great summary of this from Assistiveware.

It is also really worth checking out the wealth of resources on the iPads for Learning site from Victoria. These include app reviews, stories around using iPads in a range of schools and lots of nuts and bolts of rolling out iPads in schools and a wealth of other information.

(Please see the end of this handout for further links and resources in this area)

Teaching and Learning – content
The iPad is a fabulous teaching tool. Of course, we always need to keep good teaching practice in mind when using it. We always need to consider the student, the environment and the task when picking the best tool for each situation. Think about using the SETT framework or another similar model when making these decisions. You might also want to consider using an evaluation rubric within your school for evaluating, sorting and sharing information about Apps.

And with around 500 new Apps being submitted to Apple every day there is a lot of change in this area. Many of the resources listed in this handout keep track of specific areas of Apps – helping you find out when new relevant Apps are released. (See http://148apps.biz/app-store-metrics/ for App Store figures and numbers)

iPad in Literacy Learning and Support
The iPad can be used to support both reading and writing goals within literacy. Consider using Digital Storybook Apps to support early readers – apps such as Hairy Maclary from Donaldson’s Dairy (from Kiwa Media), Blue Hat, Green Hat (from Loud Crow), Far to the North HD (from PicPocket Books), Lazy Larry Lizard or Winken, Blinken and Nod. Books which have word-by-word highlighting can be helpful for emergent readers and writers. I have had enormous success with some students who have been really motivated by the word-by-word highlighting – but we need to make sure that we don’t continue to use word-by-word highlighting once students start to develop their literacy skills as we need to make sure that students develop appropriate eye movements (and we don’t move our eyes in a straight line from left to right as we become competent readers).
As well as individual digital storybook apps, there are an increasing number of leveled reader apps available. Learning A-Z has a number of leveled libraries available e.g. LAZ Level aa Library, LAZ Level N Library, obook Library (which hosts the Oxford Literacy titles).

Use books like “When You Grow Up” from Stepworks to help students develop language and vocabulary concepts. And check out Digital Storytime for digital storybook app reviews and the Daily Deal Page.

Apple’s own eBook reader, iBooks, is also a growing source for eBooks. The Australian store now has a much greater range, and children’s picture books are starting to appear in greater numbers. Check out iBooks such as “Baby Wombat’s Week”. Enhanced iBooks are also available (although small in number) and contain audio to go with the book. “Bach’s Farm Animals” is a free enhanced eBook that you can use to check out this format. You can also just search for enhanced books in the iBookstore to see the range.

Some iBooks can be supported with the inbuilt iPad speech by highlighting text and selecting “Speak Text”.

TarHeel Reader is now compatible with the iPad too. I’ve also written a blog entry on TarHeel Reader and explained some of the features at http://www.spectronicsinoz.com/blog/web-links/tarheel-reader-a-fabulous-literacy-resource-for-all/

In addition, you can turn your own PPT or Word books and photo stories into PDFs or ePubs and install them in the iBookstore. I have written step-by-step instructions on how to do this at http://www.spectronicsinoz.com/blog/apps-and-mobile-learning/tarheel-reader-books-a-great-resource-for-ibooks-on-your-ipad/

And Read2Go now offers an accessible eBook reader for readers with learning difficulties. I’ve done a review of this online at http://www.spectronicsinoz.com/blog/web-links/read2go-app-ready-set-read-for-students-with-learning-difficulties/. Students also need to become members of Bookshare to use this app.

Apps used in this section:
Hairy Maclary from Donaldson’s Dairy
Blue Hat, Green Hat
Far to the North HD
Lazy Larry Lizard
Winken, Blinken and Nod
When You Grow Up
iBooks
Read2Go
There are a range of writing tools (and apps which can be used as writing tools) on the iTunes store. Check out Spectronics’ list of Apps for Literacy Support for a list of their favourite tools in this area.

Abilipad is my favourite writing tool for the iPad for developing writers. It allows you to create custom keyboards, cells and activities. I have written a review of this at http://www.spectronicsinoz.com/blog/new-technologies/intellipad-the-write-tool-for-the-ipad/.

AssistiveChat is one of my favourite Apps for using the iPad as a pencil for developing writers. AssistiveChat lets them write and hear as they write each letter, word and/or sentence. Pages is a word processing App from Apple. Typ-O HD is another favourite writing App. Typ-O HD has word prediction, speech support for both the writing and the word prediction and users can email the writing to themselves for future editing or to save.

Notability is a helpful App for students in secondary and tertiary study. It lets the user make a recording at the same time as they are taking notes. They can also supplement the notes with photos and other images. I wish I had had this App when I was studying. Dragon Dictation is an App designed to convert your speech into text. An internet connection is required at all times for this App to work – and success is a little varied – but this can be a great tool.

The iPad can also be used to help students work on literacy goals in other areas too. For example, Word Wall HD can be used to help develop phonological awareness through onset rime (see http://www.spectronicsinoz.com/article/onset-rime-word-families for more information on this). Word Magic can be used to practice inserting the missing letter from 3 – 6 letter words, focusing on initial, medial or final sounds. Sound Sorting Beginning Sounds helps students to listen to initial sounds in words. Reading Raven lets you practice alphabet awareness in a game format. Spelling Tutor lets you make spelling lists, practice with them and be tested as well.

Apps used in this section:
- Abilipad
- AssistiveChat
- Pages
- Typ-O HD
- StoryPatch
- My Secret Diary
- Notability
- Dragon Dictation
- WordWall HD
- Word Magic
- Beginning Sounds Sound Sorting
- Word Magic
- Reading Raven
- Spelling Tutor
Sources for Quality App Reviews
There are a range of sites which offer reviews of Apps. Particularly, look for sites where Apps are reviewed by teachers or special ed teachers, although Apps 4 Children with Special Needs does offer videos of apps which can be very helpful.

Please see the end of this handout for my suggestions and favourites.

Tips and Tricks
Make sure that you become aware of the Settings within the iPad that can be useful. Look at restrictions – you can turn off deleting Apps and restrict access to some other apps and features.

Also look at the settings within Apps. Many special education specific apps have options to change the responsiveness of the touch screen which can help some students.

Working through the MacWorld iPad 2 Starter Guide will also give you some other helpful tips and tricks.

(Please see the end of this handout for further links and resources in this area)

Accessibility and Access
Go to Settings -> General -> Accessibility to see the range of Accessibility Options built into the iPad.

Look at Apple’s Accessibility documentation for the iPad and iPad 2. Also check Luis Perez’s YouTube Channel which has some great videos in this area and David Woodbridge’s MP3s on VoiceOver on the Vision Australia website.

There are a number of styli also available for the iPad. A T-bar stylus and a mouthstick is available from http://www.etsy.com/shop/shapedad. Styli compatible with the iPad have to be compatible with a capacitive screen.

Bluetooth keyboards can be used with the iPad and there are some cases available with an inbuilt Bluetooth keyboard e.g. Logitech keyboard case. In addition, many wired keyboards can be used with the help of the Apple iPad camera connection kit.

Keyguards for specific Apps can also be purchased. Lasered Pics make a range of keyguards in both Perspex and Acrylic. Yooralla Glenroy also make Perspex keyguards.
Apps used in this section:
- Pac-Man
- Breath Bird
- RadSounds
- TapSpeak Choice
- Predictable

(Please see the end of this handout for further links and resources in this area)

**Accessories**
The iPad is a very cool piece of technology – but it isn’t necessarily durable or moisture proof. Accessories can provide extra protection in these areas.

The Gumdrop Drop Series cases and the Otterbox Defender are two examples of protective cases. Both make the iPad much more durable in case of accidents but add quite a bit of weight. The iAdapter is a protective case with inbuilt speaker and a cover for the home button.

ZAGG make a full body clear protector called the Invisible Shield which may provide some moisture protection and Tunewear make a very waterproof case called Waterwear which is designed for sailors and which should protect the iPad from rain.

The BubCap is a sticker that goes over the home button and makes it harder to press – available in two strengths.

(You can also look at the end of this handout for further links and resources in this area.)

**Apps for AAC**
There are over 150 AAC Apps now on the iTunes store. I keep a list of these (with reviews) at [http://www.spectronicsinoz.com/article/iphoneipad-apps-for-aac](http://www.spectronicsinoz.com/article/iphoneipad-apps-for-aac)

There are three main categories of AAC Apps – Apps with symbol based displays, Apps with Text-To-Speech and Symbol displays and Apps with Text-to-Speech and a large variation in the quality of these Apps.

As well as Apps that can be used directly for communication, there are also some Apps which can support low/light tech AAC. RIDBC Auslan Tutor and Baby Sign and Learn in Auslan can both be used to practice signing. Pic Card Maker can be used to make picture cards.
Apps used in this section:
- TapSpeak Sequence
- TapSpeak Choice
- TouchChatHD
- Predictable
- Verbally
- Proloquo2Go
- Scene&Heard
- RIDBC Auslan Tutor
- Baby Sign and Learn in Auslan

Visual Support Apps
There are a large number of Apps which can be used as Visual Supports – and not all of these are specifically designed for this area. There are talking photo Apps designed for family holiday snaps which work well for building social stories or making visual sequences. There are also a range of specifically designed visual support Apps, such as First Then. Obviously, for each student we need to consider whether these provide enough of a visual cue for each student as the visual support App will be minimized when other Apps are being used.

Visual schedules: First Then Visual Schedule, Picture Scheduler

Talking books and photo albums: Pictello, Click ‘n Talk

Rewards: ChorePad HD, Visual Grocery

Visual Timers: TimeTimer, ASD Timer

Other: iDress for Weather

For a round up of some of the highlights in Visual Support Apps please see Charlene Cullen’s blog post on this topic at http://www.spectronicsinoz.com/blog/tools-and-resources/visual-support-apps-for-ipodipad/

Apps used in this section:
- First Then Visual Schedule
- Pictello
- Click ‘n Talk
- TimeTimer
- iDress for Weather
Other Apps

There are Apps which can work on other skills such as fine motor skills, voice control or sensory apps, or on curriculum areas such as maths, art, music and language.

For example:

- Dexteria
- Bubbles
- Paint Sparkles Draw
- Baby DJ
- Clicky Sticky
- Wheels on the Bus HD
- Slide 2 Unlock
- Toy Story
- Whizzy Kids
- What am I?
- Math Bingo
- Pizza Fractions
- Jungle Coins

And don’t forget – this is a static document. The App world is constantly changing so keep an eye on changes and additions to apps at some of the sites I recommend.
